INSTRUCTIONS

- All questions are compulsory.
- Late submissions not allowed.
- Total marks: 20.

Questions

CLO-3 Apply unsupervised learning techniques to solve clustering problems.

1. Implement a K-means clustering algorithm in Python to cluster the Iris dataset.

Marks: 10

2. Explain the concept of 'elbow method' in determining the optimal number of clusters for K-means algorithm and provide a Python code snippet to demonstrate it.

Marks: 10
